ABSTRACT:

PURPOSE: To provide a cosmetic containing a high-molecular silicone and a powdery polymethyl silsesquioxane, free from oily touch in application or stickiness of the skin after application and having a dry and comfortable feeling in use.

CONSTITUTION: This cosmetic contains 0.1 to 15wt.% one or more kinds of high-molecular silicones represented by the formula [R1 is methyl or phenyl; R2 is methyl or OH; (n) is 3000 to 20000] and 0.1 to 15wt.% powdery polymethyl silsesquioxane as the active components. The compound of the formula exhibits a soft and rubbery state and its preferable example is methylphenyl polysiloxane. The powdery polymethyl silsesquioxane has a three-dimensional network structure of siloxane bonds and an intermediate structure between an inorganic material and an organic material in which one methyl group is bonded to a silicon atom. As this powdery polymethyl silsesquioxane, Tospearl 240 sold on the market is exemplified. As the form of cosmetics, a skin care cosmetic such as a lotion, a milky lotion or a cream, a make-up cosmetic such as a lip stick, an eye shadow or a foundation, a hair-care cosmetic, a detergent, etc., can be used.

DOCUMENT-IDENTIFIER: US 4090015 A

TITLE: Method for polymerizing dienic monomers

Detailed Description Text (70):

Coating material (u): Methylsilicone varnish KR 251 (product of Shin-Etsu Chemical Co.).

Detailed Description Text (71):

Coating material (v): KR 251 (see above) mixed by 0.5% (based on the siloxane) of iron octoate.
